Complete solutions with system

Qualität

Quality

Environment

RIGK has been an active member of EPRO, the European Association of recovery systems, since 2006. RIGK is the joint organizer with EPRO of the International Recycling Forum.

We understand your business

RIGK is a service provider from industry for industry and commerce, founded by renowned plastics and packaging manufacturers.

INEOS

Your procurement solution for recycled plastics

plastship focuses on the **distribution of recycled plastics** in cooperation with recyclate suppliers and the production of suitable recyclate formulations as a link between product demand and recyclate quality.

Through its constantly growing digital database, the Plastics Recycling Network provides a quick overview of the supply of the recycling market with data sets of over **2,000 continuously available recyclate qualities**.

As a distributor, plastship suggests suitable plastic recyclates for every requirement, accompanies material qualification processes as well as **material quality improvements** and ensures the continuous supply of the goods.

RIGK's superior goal in participating in plastship is to promote the use of recycled plastics.
